

Flood Alert

Real-time flood warning updates – sent direct to your smartphone

Flood Alert is our highly successful smartphone flood warning application. It allows users to receive real-time updates on flood alerts and warnings near them, at locations important to them and for the rest of England and Wales. Available on Apple, Android and Blackberry devices.

Everyone in an 'at risk' area needs to be aware of flooding and keep an eye on the water levels and weather situation. You can do this by checking the flood forecasts and the river and sea levels on the Environment Agency or Natural Resources Wales websites, by listening to local news and weather forecasts, or by simply opening our Flood Alert application on your smartphone.

Using the latest technology, the Environment Agency provides Jacobs - as a licensed flood warning service provider – with live flood warning data throughout England and Wales, 24 hours a day (updated every 15 minutes). Data for Wales is provided by Natural Resources Wales.

Using the live flood warning feeds, Jacobs has developed Flood Alert, a smartphone application, which allows users to monitor flooding quickly, efficiently and conveniently in areas that are important or close to them.

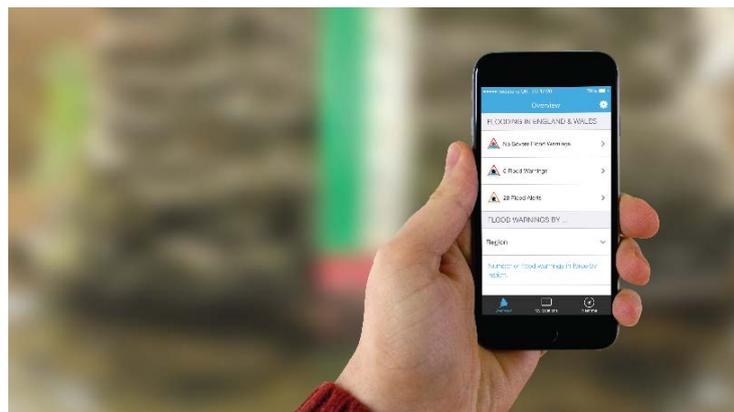

The application provides guidance on how to be prepared and what to do when it floods, together with associated and relevant links to the Environment Agency and Natural Resources Wales websites.

Flood Alert also allows you to contact Floodline, the Environment Agency's free flood warning service, to obtain further information.

Our technology can be adapted to meet clients' specific needs and can be integrated with their existing systems.

Key benefits of Flood Alert

- Available free
- Can be installed on Apple, Android and Blackberry devices
- Uses credible data - Environment Agency (England) and Natural Resources Wales
- Data is updated every 15 minutes
- Set up to two user-defined locations to monitor local flood warnings
- Displays flood warnings by region, county (unitary authorities) or local authority area

Real-time flood warning updates – sent direct to your smartphone

JACOBS

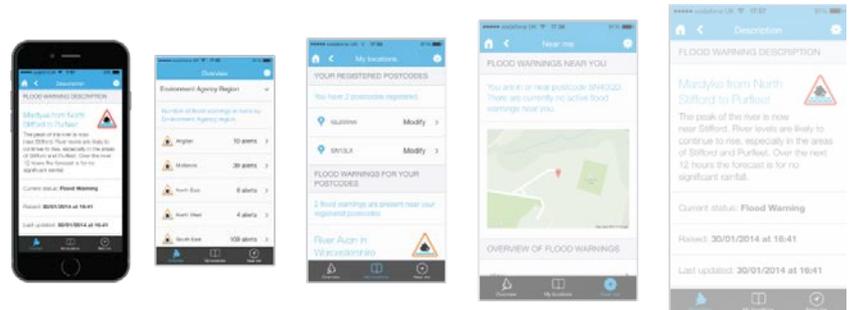

Flood Alert is developed by Jacobs, a global leader in consulting, design, design-build, operations and program management.

"Flood Alert is a great example of joint working, using our data in innovative ways to ensure flood warnings reach more people through new channels."

Frazer Rhodes
(Environment Agency)

Key features of Flood Alert

Flood Alert allows users to monitor flooding quickly, efficiently and conveniently in areas that are important or close to them. As the application is fully integrated with the users' smartphone, they can communicate the risk of flooding to a friend or family member by text message, email or telephone call.

Download Flood Alert

Flood Alert is free to download and is available on Apple, Android, Windows and Blackberry devices.

Flood Alert provides flood warning information for:

The application provides an overall view of flood warnings in England and Wales. Users can monitor flooding events on a national scale, viewing current flood warnings in force in each county, local authority or Environment Agency/Natural Resources Wales region.

Users can register for a Flood Alert account where they can save important locations, such as residential or business addresses. For each saved location, Flood Alert will provide notifications up to two days in advance of predicted flooding, allowing users to prepare well ahead.

Using the geo-location functionality in a user's smartphone, Flood Alert shows any flood warnings within 5 km of the current location and information about any potential risks.

Custom applications

Jacobs aims to take your complex data and deliver a simple solution — creating innovative software solutions, powerful web applications and tools. Our Flood Alert technology can be adapted to meet clients' specific needs and can be integrated with their existing systems.

As technology advances and the programming landscape changes, we constantly evaluate the latest trends in the development community to make sure that we are able to provide the most suitable solution for our clients, either online or mobile.
